

## AVP-\*\*V - Single Pump

### Features

The AVP series single vane pumps are excellent for medium to low pressure mobile and industrial applications. The hydraulic balancing structure and intravane design provides more stable performance and a longer life span by minimizing the pressure on the stator from the vane. This is achieved by incorporating diametrically opposed inlet and outlet pressure chambers. The 12 vane system provides low amplitude flow pulsation for quiet operation, ideal for industrial applications. Four different outlet position options allow flexibility in various applications. The AVP's cartridge is independent from the drive shaft, which allows for easy servicing without having to remove the pump from its mount.
